

REACH REGULATION/ROHS REQUIREMENTS

Our products are build up out several materials. The company policy is to use only materials and processes which comply with the Reach Regulation and the ROHS Requirements.

According to the Reach Regulation Thomas Regout International B.V. is a down-stream user. As such, we have asked our suppliers to deliver us products according to the Reach Regulation and 'if necessary' to pre-registry these products. We have asked our suppliers, when they, or their suppliers, don't pre-registry to inform us and to offer a replacement for that product according to the Reach Regulation.

During several years the substances, which are prohibited by the ROHS requirements, are not used in our products.

Our products fulfill the ROHS requirements for the substances:

- **Hexavalant chromium (Cr6+)**: We don't use this substance in our process. We use only a Cr3+ process.
- **Lead (Pb)**: The grease that is used in our product is free of lead. In our electroplating department we also don't use lead.
- **Cadmium (Cd)**: The Galvanic process is free of Cadmium.
- **Mercury (Hg)**: We don't use mercury in our company.
- **PBB/PBDE**: Our synthetic products are free of these substances.
